# Successful Planning & Implementation with Picote

Rehabilitation projects can be daunting, especially considering all of the small details that need to be taken care of, solutions can often seem out of reach. Picote can respond to this challenge, working with you to produce the necessary planning, as well as finding the best solutions for the job in hand and helping the end client understand what all of this requires, whether they are a utility company, housing association or municipality. Our award-winning tools and solutions benefit not only our own team in the field but also contractors around the world. Our global technical team has decades of experience in the trenchless field from planning to completion of projects.

## Valuable Service with Great Return

Working with Picote's international team of experts is less expensive than you may think. Take advantage of our free consultation to discuss your project or business needs. Let us do the paperwork, data collection, liaising with clients and scheduling, while you focus on the work. Of course if you need help with that too, we are more than happy to be of service. Training and jobsite support is set at a daily rate per person, plus any travel and accommodation expenses. Let's work together and achieve more!

## Consulting

Our Team of experts can help you, from winning a tender, all the way through the initial planning to work phases and post-project management. Sharing our extensive knowledge, we will build a template that you can utilise on future jobs, providing you with the tools to grow your business.

## Project Management

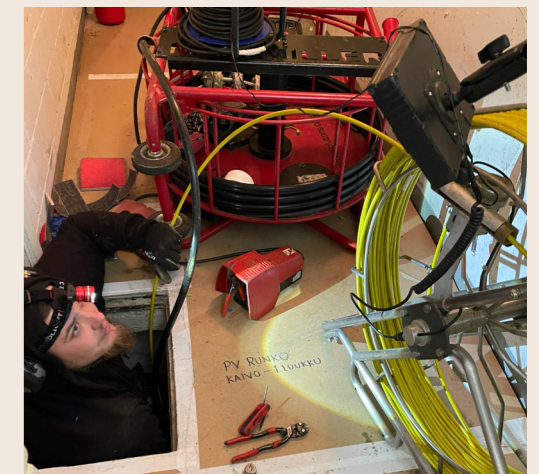

You do the work, we do the planning, including dealing with the day-to-day issues which can really eat into your time. From the site visit we can determine a pre-works schedule and arrange for as much of the site preparation to be completed as possible before you even get to site, so you can just get on with the job at hand.

## Project Review

Our initial site visit is important to get an understanding of the project to plan everything from the necessary preparation to work phases and scheduling.

- Stack pipes: do they line up with the building schematics or not. Where do they need to be cut and what levels are they on.
- Check for air vents and manholes to main lines.
- Storage spaces: this is especially important for multi-storey buildings.
- Residents/businesses: who is living or working at the premises, are there restrictions on working hours or are there additional considerations/needs.
- Access to air, electric and water.
- Parking: will there be any work van access issues or are permits required.
- What materials will be required for the job.
- Rubbish: is there an area for storing waste.
- Timeline for works required.
- Talk with Housing Association and/or building superintendent.

The visit typically takes between 4 and 8 hours.

## On The Job Support

Need some help on site? Our highly experienced team can provide needed support wherever necessary. If you are new to in-house lining or brush coating, we can teach you while we work alongside you. This does need to be planned in advance as our teams have busy schedules throughout the year.

## Post Project Needs

We collect, record and store all the relevant data from your project so that you can provide your client with a comprehensive handover on completion of the project. This is also very important for quality control. Post-project management also includes follow-up visits and inspections.

# Specialised Hands-On Picote Training

Porvoo is where it all started for Picote!
